Professional Summary

Junior Full Stack Developer with hands-on experience in a production ERP (SIGI, Genero 4GL / Informix) and in a modern stack (Next.js, NestJS, PostgreSQL, TypeScript). I worked in technical sales and B2B customer service before programming, which gives me a business perspective that is uncommon in a junior profile. At Proyectos Informáticos I fix production bugs, build mobile and web applications for the system and, since July 2026, coordinate the development team's work. I want to keep growing in full stack development, on projects where code solves real business problems.

Work Experience

Project Manager (alongside development)

Proyectos Informáticos | July 2026 – Present | Córdoba, Argentina

- Coordinate the development team and report its daily progress, guiding priorities and unblocking tasks when the team needs it.
- Act as a bridge between client needs and the technical team: gather requirements and translate them into development tasks.

Junior Full Stack Developer

Proyectos Informáticos | June 2025 – Present | Córdoba, Argentina

- Develop and maintain SIGI, an ERP built in Genero 4GL / IBM Informix and used by multiple municipalities and companies in Argentina; fix critical production bugs.
- Built Android apps (Genero Mobile) for meter reading, photo upload with QR scanning and customer lookup, eliminating thousands of paper forms every month.
- Modernized PDF report generation across 16+ system modules, cutting manual data-entry errors by 70%.
- Developed SIGI's corporate website in Next.js and Tailwind CSS, self-deployed on a VPS (Linux, Nginx, PM2, PostgreSQL).
- Working on integrating RFID readers with SIGI to automate goods in/out control for an apparel company, aiming to reduce manual checks and order-picking errors.

Auto Parts Salesperson

Mundo Maipu (Chevrolet dealership) | January 2023 – February 2025 | Córdoba, Argentina

- Managed auto parts sales using SAP, coordinating direct factory purchases and insurance-claim quotes.
- Analyzed stock levels to improve inventory turnover and spot sales opportunities, applying sales strategies segmented by customer type.

IT Technician (self-employed)

JOMD | January 2020 – June 2025 | Córdoba, Argentina

- Installed and maintained operating systems, drivers and networks; cleaned, upgraded memory on and recovered laptops and PCs.

Education

Higher Technical Degree in Programming | Teclab Instituto Técnico Superior, 2025

Featured Projects

DoIT – Smart CRM for WhatsApp sales (in development) — *Next.js (PWA)*

- Own product for salespeople: organizes customers and orders that arrive via WhatsApp. In development, with a soda delivery business as pilot client (customer and dispenser records with location and photo).

Gym Management System — *Next.js / NestJS / PostgreSQL*

- Full stack application with Prisma ORM. Modules for members, plans, memberships, payments and authentication with protected routes.

SIGI Corporate Website — *Next.js / Tailwind CSS*

- Commercial and corporate site deployed on a self-managed VPS (Linux, SSH, PM2, Nginx, PostgreSQL) with a full Git workflow.

Meter Reading App – SIGI Mobile — *Genero Mobile / Android*

- Offline-first app for municipal meter surveys, with CSV import/export and server sync. Eliminated thousands of paper forms every month.

SIGI SendPhoto – Photo upload with QR — *Genero Mobile / Android*

- QR code scanning through a custom GMA extension (ZXing), with photo capture and upload linked to ERP records.

Customer Lookup App – SIGI Mobile — *Genero Mobile / Android*

- Autocomplete search and REST web services to look up customers in real time from the ERP.

Professional Landing Pages — *Next.js / Tailwind CSS / Vercel*

- Landing page portfolio (TaskFlow, Sakura Kitchen, Digital Growth Mastery) focused on modern UI/UX and responsive design.

Technical Skills
